

NLB-2000

TECHNICAL DATA SHEET

NLB-2000 contains a blend of bacteria which degrade fats, oils and greases (FOGs). This biological degreaser is used to eliminate FOGs in floor drains and sewer pipes. These bacteria are native to Canada and are non-pathogenic, non-opportunistic, and non-toxic, making NLB-2000 a safe and environmentally friendly solution to controlling FOG buildup in restaurants, cafeterias and sewer pipes.

INTENDED USE

NLB-2000 is used to remove fats, oils and greases that have accumulated in sewer pipes and floor drains. This product can also be used for on-going maintenance.

Environmental Conditions for use:

Range	Optimum Range
Temperature Range: 4° to 40°C	22° to 32°C
pH Range: 6.0-8.5	7.0 - 7.4
Moisture Content: 15-22%	18 - 20%

PREPARATION AND APPLICATION

Please refer to material safety data sheet (MSDS) prior to using this product.

Pour 1L of NLB-2000 directly into floor drains and sewer pipe connections to remove FOG that has accumulated in pipes. Depending on the extent of the buildup additional applications may be required to completely clear the pipes. For ongoing maintenance 1L of NLB-2000 should be poured directly into the drain pipes once a month to prevent buildup of FOG.

PHYSICAL PROPERTIES

NLB-2000 is a slightly cloudy liquid with a musky odour. It is shipped 1L container sizes and must be refrigerated during storage. The optimum storage period for this product is not more than 3 months.
